How to rearrange pages in pdf foxit

Click the tool you want to use and go to the appropriate tool page. Choose the file: upload files to our online PDF converter tools from your computer, or simply drag and drop files into the PDF converter box. You can even upload files from a cloud storage service like Google Drive to our online PDF converter. Free PDF conversion from Word, Excel, JPG and HTML files, or convert from PDF. Use our online PDF conversion tools to automatically convert files to PDF files. When you upload a PDF file, select the type of file you want to convert to and leave the rest to our free conversion tool. When your PDF conversion files are ready, you can have the file sent to your email, or download the PDF file to your computer and use your browser to view the file. Foxit PhantomPDF Mac allows you to insert file pages (either from a range of pages or the entire file), clipboard and a blank page. Inserting Pages from a File Open the Arrange toolbar using one of the following options: Choose Tools > Arrange. Click the Common Tools toolbar and choose Arrange. Choose one of the following methods: Click Insert on the Arrange toolbar and choose From File. Move your mouse over the blank position before or after a page thumbnail, and you'll find the Insert icon. Click the Insert icon and select From File. In the pop-up dialog box, select the file type from the Options drop-down list, select the file you want to insert into the destination document, and click Open. In the Insert Page From dialog box, do the following: Click Add Files to add more files, if necessary. If you add multiple files, you can reorder the file to be displayed in the merged PDF by clicking the Move Up or Move Down button. Specify where you want to insert the file and page range of the file you want to insert. Click OK >. Click the Common Tools toolbar and choose Arrange. Choose one of the following methods: Click Insert on the Arrange toolbar and choose From Clipboard. Move your mouse over the blank position before or after a page thumbnail, and you'll find the Insert icon. To insert a new page before an existing page, click the Insert icon before the thumbnail of the existing page and choose From Clipboard. New pages can be added after an existing page in the same way by clicking the Insert icon after the thumbnail. (Optional) If you choose Insert > from Clipboard on the Arrange toolbar, specify the destination the one you want to insert pages and click OK in the pop-up From Clipboard dialog box. Open the Arrange toolbar by using one of the following options: Choose Tools > Arrange. Click the Common Tools toolbar and choose Arrange. Choose one of the following methods: Click Insert on the Arrange toolbar and choose Blank Page. Move your mouse over the blank position before or after a page thumbnail, and you'll find the Insert icon. To insert a blank page before an existing page, click the Insert icon before the on the existing page and choose Blank Page. You can add new blank pages after an existing page in the same way by clicking the Insert icon after the thumbnail. (Optional) If you choose Insert > Blank Page on the Arrange toolbar, specify the destination where you want to insert pages and click OK in the Insert Blank Pages pop-up dialog box. Open the Arrange toolbar by using one of the following options: Choose Tools > Arrange. Click the Common Tools toolbar and choose Arrange. Do one of the following: Select the page you want to rotate and click Left or Right on the Arrange toolbar to rotate it clockwise or counterclockwise. Move the mouse over the page you want to rotate and click or float on the page thumbnail to rotate the page counterclockwise or clockwise. Open the Arrange toolbar by using one of the following options: Choose Tools > Arrange. Click the Common Tools toolbar and choose Arrange. Drag the page thumbnail to the desired location. Open the Arrange toolbar by using one of the following options: Choose Tools > Arrange. Click the Common Tools toolbar and choose Arrange. Move the mouse over a page you want to delete and click enfloating on the page thumbnail to delete the page. Extracting is the process of reusing selected pages from a PDF to a different PDF. Open the Arrange toolbar by using one of the following options: Choose Tools > Arrange. Click the Common Tools toolbar and choose Arrange. Click Extract on the Arrange toolbar. In the Extract Pages dialog box, do the following: Specify the range of pages to extract. To extract even or odd pages, the page range must include an even page and at least one odd page. Choose a extract mode type: Extract pages as a PDF: Save all extracted pages to a new PDF file. Extract each page as a PDF: Create a single-page PDF for each extracted page. Select one of the options: Immediately save the extracted pages: Save the extracted pages to a new PDF file after you click OK. If this item is not checked, a new PDF will open that includes the extracted pages without saving. You'll have to save it manually. This option is not available when you choose to extract each page as PDF. Delete pages after extraction: Delete selected pages from the original document after extraction. Click (Optional) If you choose to immediately save the extracted pages, specify the file name and location to save the extracted pages in the save pop-up dialog box and click Save to save it. The Duplicate Pages feature allows you to copy pages within a PDF document. Open the Arrange toolbar by using one of the following options: Choose Tools > Arrange. Click the Common Tools toolbar and choose Arrange. Click Duplicate on the Arrange toolbar. In the Duplicate Pages dialog box, specify the page, destination, and copy count that you want to duplicate, and then click OK. You can replace an entire PDF page with another PDF page. Open the Arrange toolbar by using one of the following options: choose Tools > >. Click the Common Tools toolbar and choose Arrange. Click Replace on the Arrange toolbar. Select the PDF document that contains the replacement pages and click Open. In the Replace Pages pop-up dialog box, do the following: In the Original group, specify the range of pages to replace in the original document. In the Replacement group: Specify the range of replacement pages. You can also click Browse to change the selected file. Click OK. The Split Document function is a process of splitting one or more documents into multiple smaller documents. Open the Arrange toolbar by using one of the following options: Choose Tools > Arrange. Click the Common Tools toolbar and choose Arrange. Click Split on the Arrange toolbar. In the Split Document pop-up dialog box, do the following: Select one of the criteria to split the document from the Split Document by: Number of Pages drop-down list. Specify the maximum number of pages for each document in the split. File size: Specify the maximum file size for each document in the split. Top-level bookmarks: Create a document for each top-level bookmark if the document contains bookmarks. Blank page: Split the document each time a blank page is found. Blank pages will be discarded when splitting. Click Output Options to specify the storage location, file names, and so on. Click OK. Almost anyone who has used a PDF editor like Foxit PhantomPDF knows some of the editing options available. However, there are advanced organization tools available in PDF software like PhantomPDF that can have a dramatic impact on the quality of your PDF files. And if you're not using them yet, you might want to try them. Foxit PhantomPDF comes with built-in functionality to combine multiple PDF files and split a single PDF into one- and multi-page PDF files according to page numbers as well as page range. That means you can extract exactly the pages you want, or split a PDF file into just the pages you need. You can also organize PDF files by rearranging pages, writing page layouts, and more. PDF software like Foxit PhantomPDF displays an overview page without any additional software so you can easily see what you're working on. Allows you to split, merge and rearrange pages in your PDF document. Inserting pages from one file (document merge) Foxit PhantomPDF gives you a couple of ways to insert one PDF into another. You can drag and drop pages from one document to another – PhantomPDF allows you to have multiple open at once in different tabs. You can also insert an entire PDF file into another PDF file, or insert pages from a paper document using Foxit PhantomPDF and its scanner to scan and embed them in your existing PDF document. This makes it easy to customize your PDF document the way you choose and speeds up workflows when you need to combine documents to create a new report, form, or brochure. Reorder pages When you need to rearrange the order of pages in your PDF file, use the drag-and-drop view of pages. Simply expand the thumbnail on the left side and drag and drop, what could be easier? This is very useful when preparing presentations or reports, as you are free to decide to move the content until it suits you. Deleting PDF pages software like PhantomPDF gives you ways to delete unwanted or blank pages, again allows you to customize your documents the way you want them. Do you have information pages that are no longer relevant? Need to delete pages that contain sensitive information? The Delete Pages feature makes it easy. Extracting Pages Extraction is the process of reusing selected pages from a PDF into a different PDF. Extracted pages contain not only the content, but also all form fields, comments, and links associated with the content of the original page. You can leave the extracted pages in the original document and create a new PDF that includes all the pages extracted during the extraction process, comparable to the familiar processes of cutting and pasting or copying and pasting, but at the page level. This makes it exceptionally easy to extract sections of large PDF documents for use in other documents. Replace Pages If you need to place a page where another page comes out of your PDF file, no problem. With the Replace Page option, you can refresh a single page by simply replacing it with its updated page in a quick step. The text, images and comments on the original page will be replaced. There's no need to do anything else. Swap two pages When you need to transpose the placement of two pages in your PDF file, Swap makes it possible. This is very useful when preparing presentations or reports, as you are free to decide to move the content until it suits you. In addition to all these organizational features, you can also duplicate and move pages. What's more, like good photo editing software, you can even rotate, crop and flatten pages to embed comments on them permanently, as you would flatten layers with a photo editor. And in the meantime, PDF software gives you the universal readability you need, so you can share your PDF documents with virtually anyone. Nobody.
